CLAMPS, LINE BLOCKS & GROMMETS  
PRODUCT OFFERING

# CLAMPS, LINE BLOCKS & GROMMETS

Our supplier's metallic and elastomer clamping systems are designed to secure and provide protection to various payloads, including wire bundles, fluid tubes, and structural members. Designs ensure ease of installation, with options to protect from high temperatures, corrosion, fluids, shock, and vibration in extreme environments.

Line blocks and grommets provide increased payload protection against heavier loads, separation of individual lines, and heightened vibration dampening. We supply custom designs that are easy to install and offer fire protection, conductivity, EMI and EMP protection.

## CAGE CODES

84971, 56271

## ATA CHAPTERS

24, 26, 29, 32, 34, 73, 77, 79
